## DJAZAQUA WHO ARE WE?

The Fishing and Fish Production fair/Exhibition “DJAZAQUA” took the plunge a long time ago! Since 2006, organized as a FORUM, DJAZAQUA has sought to encourage professionals in fishing and fisheries resources, it animated current themes and stuck to the AQUAPECHE plans and development as we are convinced that this sector can provide qualitative answers to the needs in protein of our populations. The public authorities, for their part, encourage any investment operation within the framework of the modernization and development of productive activities related to aquaculture, fishing and related industries. That the look door to port or starboard, the horizons for this sector are clear of all fog and promise continuous progress whether in the form of direct investments or of partnerships.

Ever since **DJAZAQUA** has been sailing under full sail! It will be an important international meeting place in the fishing sector and fish production. It is now the largest industry exhibition in Algeria where exhibitors and visitors can engage in networking encouraging activities and ideas. Thus DJAZAQUA adds its grain of salt to the debates of the sector and participates in the animation of current issues of fishing and fish production thanks to its international forum. This firmly rooted tradition has since become a common good, a Mare Nostrum where producers and suppliers from all over the world exchange goods and ideas for both Algeria and Africa.

Endowed with a solid sea foot since immemorial times with its 1620 km of coastline, the country has a strategic location which fully justifies the relevance of such approach. **DJAZAQUA** large-scale international exhibition houses all sectors and activities of fishing and fish production in a single port. Especially since Algeria has significant potential in terms of infrastructure. Therefore it is not surprising that it attracts the best international experience and expertise in its nets.

## Algeria's potential in the fishing sector and fish production

-  A dynamic domestic market with strong demand for fishery and aquaculture products.
-  A natural connection with the markets of neighboring countries.
-  Remarkable water resources where much remains to be done with a potential of approximately 100,000 hectares of natural or artificial water deposits for 1620 km of coastline.
-  Diversified fishery resources of superior quality (noble fish, crustaceans, cephalopods and algae).
-  Easy access to incentive government financial aid coupled with a strong political will to develop the fisheries and aquaculture sector.

Fishing and fish production are ancestral activities, however, they require cutting-edge know-how and very advanced equipment and technologies. The wide range of supplies and equipment and services are at **DJAZAQUA** to better serve the sector: innovative materials, new technologies and efficient production processes will be at the heart of the event.

## DJAZAQUA'S sectors

-  Equipment and services for fish farming: installations and systems for marine and continental aquaculture, accessories for aquaculture, fish cages, etc. ...
-  Equipment and accessories for professional fishing: fishing tackle, nets fabrication...
-  Fishing vessel and shipbuilding: fishing gear, equipment and shipbuilding, port equipment, etc.
-  Food and nutrition for fish: seaweed, animal flour, vegetal flour, etc.
-  Fish hygiene and health
-  Fish production (marine culture and marketing of seafood products): production of algae, production of cultured corals, production of cultured pearls, and production of sea fish...
-  Seafood processing: gutting machines, heading machines, filleting machines, removing bones, equipment for packaging and preservation...
-  Boats and recreational equipment.
