Saudi Airport Exhibition

International Exhibition for the Airport Industry

11 - 12 November 2024

Riyadh / Saudi Arabia

The Market

Saudi Arabia is the largest aviation market in the Middle East and has made multi-billion dollar investments in its airlines, airports and aerospace industry over the last decade. As part of the ambitious Saudi 2030 Vision – which aims to create millions of new high skill jobs, diversify the Saudi economy and transform the Kingdom into a global hub connecting Asia, Europe and Africa, Saudi Arabia has embarked on a new aviation development programme that will place it amongst the world’s top aviation and air cargo routes. The Saudi air transport sector was estimated to be supporting US\$20.2 billion of GDP and an additional US\$16.2 billion spending by foreign tourists in 2018 and is expected to grow by 126% over the next 20 years, supporting approximately US\$82.3 billion of GDP and almost 1.2 million jobs by 2037.

Air transport is integral to achieving Vision 2030 and in its drive to connect with over 250 destinations and be in the Top 5 air passenger transit hubs globally, the country will see the fastest passenger traffic growth in the Middle East between 2020-2040. As part of its new National Transport and Logistics Strategy, the Kingdom plans to invest over US\$130 billion in transport related projects – including a new airline and airport expansions that will triple airport capacity by 2030.

The Exhibition

Saudi Airport Exhibition will be the largest dedicated event for airport development in Saudi Arabia, attracting thousands of global industry officials, suppliers, investors and professionals. The event will focus on three key themes of EXPANSION, INNOVATION and COLLABORATION, giving attendees the tools and connections to accelerate the socio-economic benefits of aviation growth in Saudi Arabia.

Featuring multiple platforms for attendees to learn from global industry leaders, the event will also provide a critical platform to host bilateral discussions between Saudi aviation leaders.

Topics

- Airport industries: • Services • Baggage Handling • Cargo Handling • Passenger Handling
- Airport technologies: IT • Technical Installations • Security • Lighting • Design • Lounges • Architecture • Airport construction • Planning • Construction
- Airport Operations: Management • Maintenance • Ground Support and Handling
